

How to Create a YouTube Account

Introduction

This tutorial walks users through the process of setting up a YouTube account.

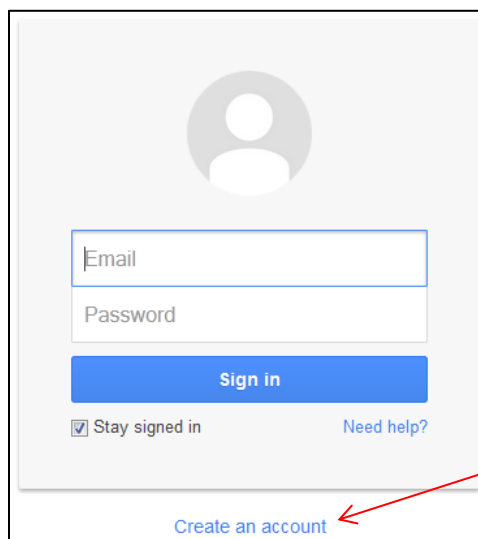

Step 1:

The video everywhere tool uses YouTube as the recording mechanism for video. The first thing that needs to be done is to sign up for a YouTube account. To start, visit <http://www.youtube.com> and click “Sign In” in the upper right hand corner.

Step 2:

Click “Create an Account” beneath the sign in area.

Step 3:

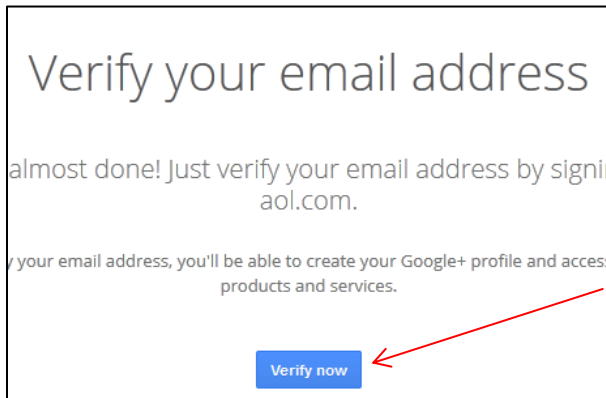

Fill out the fields required on the “Create your Google Account” page. Make sure to use your UMass Dartmouth email address.

Step 4:

You will receive a code in your email inbox. Open a separate internet window and navigate to Zimbra. Copy or write down the code that is emailed to you from Google. Make sure to pay attention to uppercase/lowercase characters – case does matter!

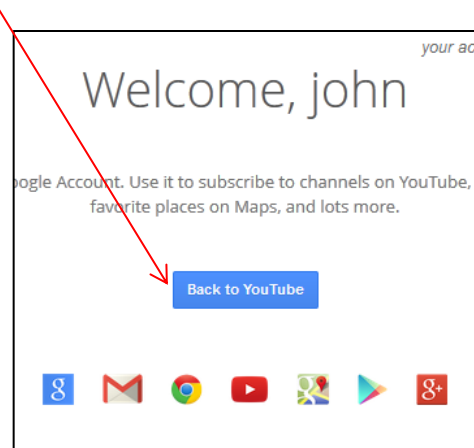

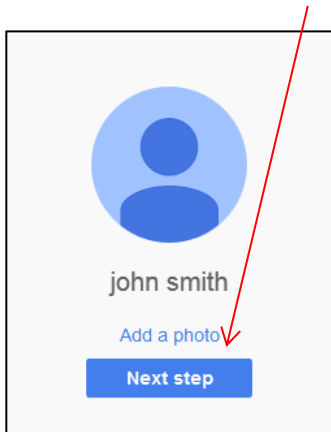

Step 5:

Click the “Verify Now” button on the original YouTube internet window and enter the code that was emailed to you.

Step 6:

On the next screen press “Next Step” and then click “Back to YouTube.”

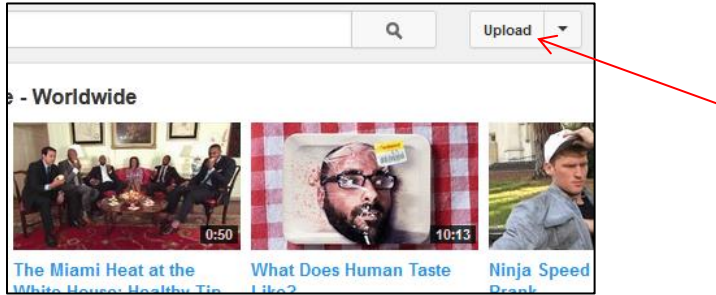

Step 7:

A screen recommending channels may also appear – press cancel to finish creating your YouTube account.

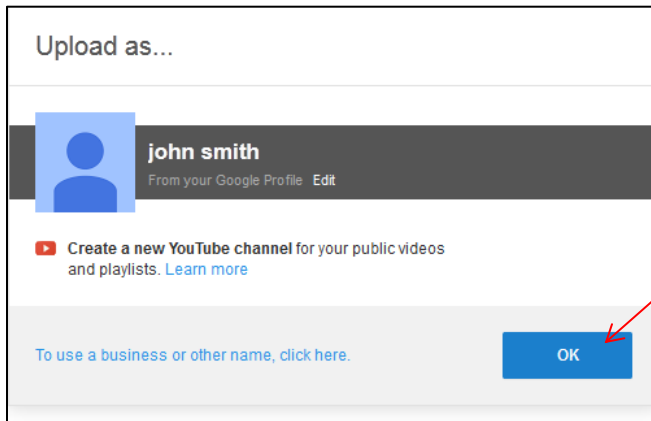

Step 8:

YouTube now requires you to verify your profile in order to upload/record videos longer than 15 minutes. To do this you'll first need to click the "Upload" button in the center/top of the YouTube page.

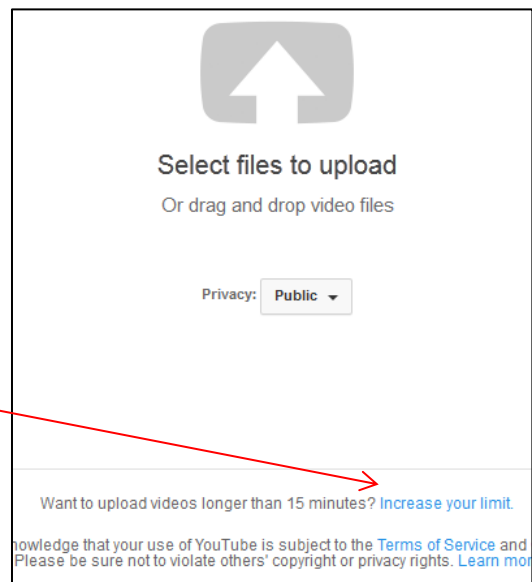

Step 9:

Press "OK" to upload videos and associate them with your name.

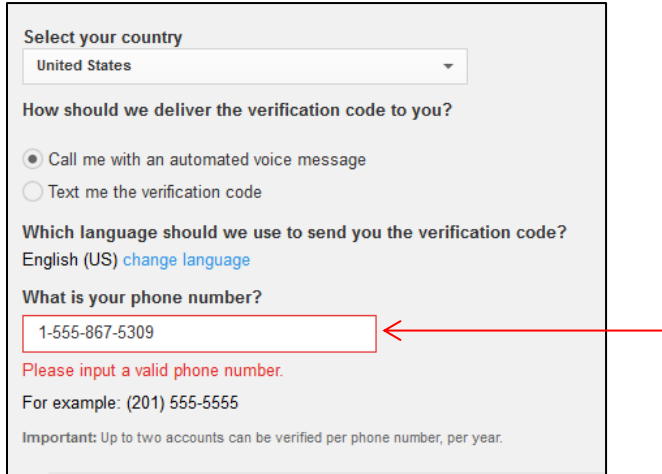

Step 9:

Click the "Increase your Limit" link at the bottom of the page.

Step 10:

Here you can select to either receive a phone call or a text message to verify your account. If you opt to have YouTube call you then you can enter your office number. If you aren't in front of your office phone you'll have to have them text you to a cell phone number.

Press "Submit." after entering your number.

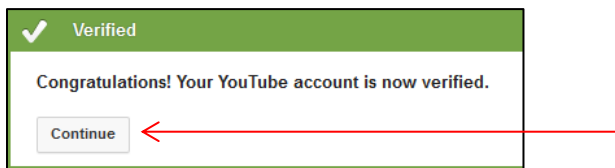

Step 11:

Enter the code that Google texts or tells you over the phone in the "6-Digit verification code" box.

Step 12:

Press "Continue" to finish setting up your YouTube account.

Conclusion

We hope this guide was helpful.
