

Using Dividers

Introduction

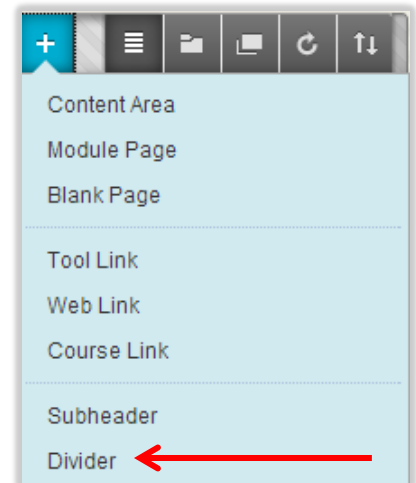

A Divider is a line that visually divides the course menu and groups related links to help users find information quickly. After you create Dividers, you can move them to the appropriate position.

Step 1: Once in the course space, make sure Edit Mode is ON.

Step 2: Once the “+” symbol appears atop the course menu, click to view a list of items to be added.

Step 3: Choose **Divider**.

Step 4: Hovering over the newly added Divider within the course menu will cause the cursor to change and add a yellow scrollbar to Divider’s immediate left. By clicking down on the yellow scroll bar, drag and drop control over the Divider is enabled within the course menu.

Conclusion

We hope this guide was helpful.
